DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Species I in the reply filed on 03 January 2007 is acknowledged. The traversal is on the ground(s) that there would be no difference in the classification, status in the art, or field of search for the species identified. Since the species identified are obvious variants of each other (i.e., change in length, size, and/or shape), the examiner agrees that there would be no serious burden to examine all the claims. Therefore, the restriction has been withdrawn and all claims have been examined.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the curved connector element (see claims 12, 13, and 18) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement-drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for

Application/Control Number: 10/787,073

Art Unit: 3731

of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the examiner does not accept the changes, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

3. The disclosure is objected to because of the following informalities: Line 4 of page 6 refers to Fig. 6, which does not exist. Appropriate correction is required.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1, 3, 8, and 17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 1 and 17 recite the limitation "the axis of symmetry," and claims 3 and 8 recite the limitation "the first and second lengths."

There is insufficient antecedent basis for these limitations in the claims.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the

Application/Control Number: 10/787,073

Art Unit: 3731

applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, 6-11, and 15-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Spence et al. (6,488,692 B1). Spence discloses a device for engaging tissue (see entire document) comprising a generally movable annular-shaped body disposed about a central axis, a plurality of expandable (between an expandable and compressed state) looped elements forming an endless zigzag pattern, a deflectable primary tine extending from a first curved region offset from an axis of symmetry, a second primary tine extending from another first curved region offset from an axis of symmetry, and a set of deflectable secondary tines that are shorter than the primary tines and disposed on either side of the primary tines (for example, see Figures 9A-9D and 9F).

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.

Application/Control Number: 10/787,073

Art Unit: 3731

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 5, 12-14, and 18-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Spence et al.

With respect to claim 5, Spence fails to disclose the material of the device comprises a superelastic alloy. It would have been obvious to one of ordinary skill in the art at the time the invention was made as a matter of design choice to construct the device of Spence of superelastic alloy, since superelastic alloys are well known in the art (for example, see Gifford's patent 5,904,697) and it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use.

With respect to claims 12-14, 18, and 19, Spence fails to disclose the primary tines are connected to the curved regions by connector elements. It would have been obvious to one having ordinary skill in the art at the time the invention was made to connect the primary tines to the curved regions by connector elements, since connector elements are well known in the art (for example, see Gifford's patent 5,904,697 Figures 38A and 40A; straight portions) and it has been held that constructing a formerly integral structure in various elements involves only routine skill in the art. With further respect to claims 13 and 18 it would have been obvious to utilize curved connector elements, since applicant has not disclosed curved connector elements provide an advantage or solve a stated problem over straight connector elements.

With respect to claims 20-23, it would have been obvious as a matter of design choice to overlap the primary tines, since such a modification would have involved a

Application/Control Number: 10/787,073 Page 6

Art Unit: 3731

mere change in size of the components. A change in size is generally recognized as being within the level of ordinary skill in the art.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Melanie Tyson whose telephone number is (571) 272-9062. The examiner can normally be reached on Monday through Thursday 8:30-7.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jackie Ho can be reached on (571) 272-4696. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
